IDENTIFIERS *New York (New York)

ABSTRACT

This is a report on the results of the Citywide Reading Test administered in June, 1979, in the elementary, intermediate and junior high schools of New York City. The testing instruments used were the California Achievement Tests. Section A of this report presents information on pupil performance for the school system as a whole. Section B contains data on pupil performance in each of 31 districts. Section C presents, by district, information on the performance of pupils in each school. In each section the following data are presented: the mean score for pupils in each grade, the median score for pupils in each grade, and the percentages of students with scores at different performance levels. The percentage of students excused from the test because of limited English proficiency is also reported. Analysis of the data shows that the performance of pupils in the 1979 Citywide Test can best be characterized as very similar to, but slightly lower than, the performance of pupils nationwide on the same tests. Compared with the results of citywide testing in 1978, the 1979 grade equivalent scores were slightly higher. (Author/MK)

INTRODUCTION

This is a report on the results of the Citywide Reading Test, administered in June, 1979 in the elementary, intermediate, and junior high schools of New York City. These tests are administered annually, in all grades from the second through the ninth.

An earlier report of the 1979 Citywide Tests, the Tenth Annual Ranking of Schools by Reading Achievement (December, 1979), was produced in compliance with the Decentralization Law. That report ranked schools according to the proportion of pupils reading at or above grade level. This report presents a broader range of data from the testing program in order to provide a more useful profile of individual schools and school districts.

There are three sections to this report. Section A presents information on pupil performance for the school system as a whole. Section B presents information on pupil performance in each of 31 districts. (District 3 did not participate in the testing program.) Section C presents, by district, information on the performance of pupils in each school.

Measures of Reading Achievement -- In each section, the following data are presented: the mean (average) score for pupils in each grade; the median (midpoint) score for pupils in each grade; and the percentages of students with scores at different performance levels. The percentage of students excused from the reading test because of limited English proficiency is also reported.

The Citywide Reading Test used in 1979 was the California Achievement Test (CAT), Form C. This test is a nationally standardized achievement test, with different test levels for each grade. Scores are reported here in terms of "grade-equivalents". Since grade-equivalent scores are frequently misinterpreted, the reader who wishes to make use of them should read the following explanation of what they mean.

In general terms, the "grade-equivalent" score is an estimate of the grade-level for which a certain "raw score" (number of right answers) is typical. The grade-level is expressed in terms of years and months. For example, if on a particular test a raw score of 26 is assigned a grade-equivalent of 4.6, this means that the test developer has estimated that 26 would be the typical or median raw score if the test were administered to all fourth graders in March, the sixth month of the school year.

There are two common misconceptions about grade-equivalents. One is that they represent the instructional level of the student: that a child who scores 4.6 can do fourth-grade work (but not fifth-grade work). There is, certainly, some relationship between instructional level and grade-equivalent. A student who reads as well as a typical fourth-grader might be most comfortable in a fourth-grade class. We cannot assume, however, that such a student could not cope with fifth-grade work -- or that the student is too advanced to benefit from the third grade curriculum. This discussion holds particularly true for the upper grades. An eighth-grader who reads only as well as a typical seventh-grader may be equipped to do eighth-grade work. According to the CAT test developer, 38% of all eighth graders read no better than the typical seventh grader.

A second misconception about grade-equivalents is that they derive exclusively from actual field tests. This is only partially true. Each test is "normed" on a large number of students; but these field tests give rise to only a few of the grade-equivalents. For example, a test designed for fourth- and fifth-graders may have been field-tested once on third-graders (in April), twice on fourth-graders (in October and April), and twice on fifth-graders (in October and April). The test publishers would thus have data on five points on the grade-equivalent scale (3.7, 4.2, 4.7, 5.2 and 5.7). They would know how

well the typical third-grade-seventh-month student actually did, and so on. However, all other grade equivalents would be estimates. This fact is particularly important when we try to draw conclusions from grade-equivalent changes of a month or two, and also when interpreting scores for students who perform either much better or much more poorly than is typical for their grade. Because the mean grade-equivalent is strongly affected by the scores of high-scoring and low-scoring students, the median may be a more appropriate measure of typical performance.

Administration of Citywide Tests, June, 1979 -- The 1979 Citywide was administered under unusual circumstances. An earlier test had been administered as the Citywide instrument. The scores obtained from this testing suggested that the publisher's norms were questionable. The Chancellor decided that a test administration using a different instrument was required. This second testing, using the CAT, was administered under emergency conditions late in the year. District 3 did not participate in the re-testing and is not represented in the 1979 scores. However, the exclusion of one district out of 32 has negligible impact on the aggregate results.

Analysis of the 1979 results -- The performance of pupils on the 1979 Citywide can best be characterized as very similar to, but slightly lower than, the performance of pupils nationwide on the same tests. This can be seen in Table IA. According to the test publishers, typical national performance on a test given in June would be 2.9 for second-graders, 3.9 for third-graders, 4.9 for fourth-graders, etc. The mean scores for New York City fourth and fifth graders were at the national level; for second and sixth graders, they were within a month of the national level; all means reported in Table 1A are

within four months of the national level. These results suggest that the reading performance of New York City students closely approximates that of a representative sample of students nationally.

However, median scores are probably more descriptive of the overall performance of New York City students; the median scores were all between two and six months below national grade level, except in grade 9, in which the median score was a month above grade level.

Table 2 indicates that 40.3% of our pupils scored on or above grade level. In fact, 42.4% of students actually tested scored on or above grade-level, because 5.0% of our students were excused from the test because of limited Englisn language proficiency. The publisher's best estimate is that 50.0% of all students nationwide would score on or above grade level -- this, of course, is how grade level is defined.

Comparison with 1978 scores -- With some caution, it is possible to compare the 1979 Citywide results with those from 1978. A comparison is possible because the California Achievement Test was administered in both years. The caution is required because the tests were not administered in the same month: the 1978 tests were given in March, the 1979 tests in June.

In terms of grade equivalents, the 1979 scores were slightly higher than the 1978 scores. (See Table 1B.) The 1979 median scores were higher than the 1978 medians in grades 2, 4, 6, 7, and 9. The 1979 medians were lower than the 1978 medians in grade 5, and the same in grades 3 and 8. It is not possible to interpret the 1979 results as an improvement in system performance; not only are the score changes very small, but the later administration of the 1979 Citywide Test by itself might account for some, if not all, of the improvement

in the scores. In fact, strict application of the publishers' guidelines might lead to the conclusion that the scores were somewhat poorer in 1979 than in 1978. This would be because test publishers assume that three months growth ordinarily takes place between March and June. To be at "grade level," on a March test a second-grader must score only 2.6; on a June test a second-grader needs a score of 2.9 to be considered at grade level. While 43.0% of our students were determined to be on or above grade level in 1978, only 40.3% were on or above grade level in 1979. As the assumption of three months expected growth between March and June may not be valid, it is uncertain whether there was a real decline in reading achievement. As mentioned above, absolute scores from the June 1979 test administration reflected a higher level of performance than did the scores from the March 1978 test administration. In effect, how one interprets the comparison of 1978 and 1979 scores depends primarily on how uniformly one expects growth in reading skill to be acquired throughout the school year.

Section A

New York City Pupil Reading Achievement Compared to National Norms

Table 1. Distribution of Citywide Reading Means and Medians and Number Tested 1979

Table 2. Distribution of Citywide Pupil Proportions at Various Reading Levels and N.E. Pupils Excluded From Testing 1979

Table 3. Pupil Reading Achievement Levels, Citywide by Grade 1979

The test results data in Tables 1, 2 and 3 that follow present both mean and median reading grade scores, proportion of pupils at various reading levels for all grades combined, and proportion of pupils at various reading levels by grade.

TABLE 1A

DISTRIBUTION OF CITYWIDE READING MEANS AND MEDIANS
AND NUMBER TESTED

JUNE 1979

	NUMBER TESTED	TOTAL READING	
GRADE	'79	*MEANS '79	**MEDIANS '79
2	57.479	2.8	2.7
3	63.407	3.6	3.4
4	60.525	4.9	4.6
5	60.560	5.9	5.6
6	60.972	6.8	6.4

Section B

Community School Districts Within New York City

Tables 4a-4h, 5, 6, 7 and 8 that follow present descriptive pupil data for each Community School District Within New York City.

Tables 4a-4h indicate the range of percentages in pupil achievement levels.

Table 5 combines all grades in the achievement levels and lists the number of pupils who were tested and excused because they were Non-English speaking.

Tables 6 and 7 present the district data for means and medians for each grade.

Table 8 presents the district data for converting median reading scores to national percentiles.

Section C

Community Schools By District

The following section contains 32 reports, one for each community school district. For each district, summary tables are presented listing pupil achievement percentages for all grades combined in that district. In addition, means and medians for each school within the district are presented.

Results for each district are presented in numerical sequence except District 32 which is placed after District 23, since District 32 is located in Brooklyn.
